- Get the real-time weather advantage from the comfort of your own computer
- Taught live by the experts using the latest in web-conferencing technology
- Real time weather data and strategies specific to this race

## **Wx LIVE!**

### **Weather Strategies for Key West 2005**

Your racing strategy shouldn't start on the day before the race. It should start as soon as you can determine probable weather patterns. Long range planning should start two to three weeks prior to start day. With so much weather data now available to the general public, you don't need a professional navigator to make strategic routing decisions based on weather. With a little background, you can create your own strategic weather advantage.

Wx LIVE! is a pre-race workshop that looks at the emerging patterns the weekend before the race. It will also serve as a refresher on how to read weather maps, identify Low and High pressure systems and associated fronts, how to make use of surface analysis maps, upper atmosphere maps, satellite images, etc. And, it will introduce new weather data that has just been made available to the public.

Wx LIVE! is designed to get your head in the game early. The day before the race is too late. Time is at a premium once the starting flag goes up. The longer it takes you to acquire and interpret a weather element the longer it takes to make an informed routing decision.

Best of all, you don't need to spend an entire day away from prepping your boat. You can attend this one-of-a-kind seminar from the comfort of your own computer. Join us on Saturday, January 8, 2005. All you need is a computer with an Internet connection and speakers or a headphone. A microphone is also recommended, but not required.
